

Zeobrite® Xtreme™

Schematic Representation Showing Water/Crystal Interface and Mode of Turbidity Reduction

(Patent Pending)

Zeobrite® Xtreme™ is a revolutionary new filtration product that combines the benefits of zeolite filtration with a chemically bonded carbon chain that attracts dirt like a magnet. You can expect higher dirt loadings and finer micron filtration without significant loss of head pressure. The NEW **Zeobrite® Xtreme™** de-stabilizes colloids, dust and other suspended solids and takes them out of the water. Cation exchange of ammonium and chloramines is not impaired. Salt water pools and chlorine shock do not adversely affect **Zeobrite® Xtreme™**.
